

# **3rd International Workshop on the Academic Asset Preservations and Sharing in Southeast Asia**

## **(Call for Participation)**

**Date: August 23 – 24, 2018**

**Venue: INTEKMA Resort & Convention Center, Selangor Darul Ehsan, Malaysia**

**Sponsored by: CSEAS, Kyoto University, Japan**

**In cooperation with: Faculty of Information Management, UiTM, Malaysia**

This workshop is intended as a forum for scholars, practitioners and students in Southeast and East Asia to share information, knowledge and technology to curate, preserve and use academic assets in the region. Southeast and East Asian countries have large diversity in many aspects – language, culture, higher education systems, industrialization levels and so forth. We are planning this workshop to share local needs and seeds for digital archiving and preservation of scholarly assets, as well as to discuss ideas to develop a network promoting collaboration in the region.

The main aims of the workshop are to:

1. understand and share the current circumstances about academic digital assets in the leading ASEAN academic memory institutions
2. provide opportunities for the participants to exchange and share thoughts, views and ideas about how we should deal with resource sharing and digital asset preservation, what kind of technology will be available, and who should be contributors to this issue
3. discuss practical approaches to build a network for collaboration rather than presentation of papers.

The last two workshops (in Kyoto and Bangkok) were mainly for presentations by participating institutes – their research and development projects. The 3<sup>rd</sup> workshop, in addition to the presentations about research and practical projects, will include tutorials to give a meeting a more practical approach.

### **About CSEAS at Kyoto University**

The Center for Southeast Asian Studies (CSEAS) at Kyoto University is one of the leading research institutes in Japan for humanities informatics. CSEAS has developed a variety of information tools/systems to facilitate digitizing humanities' materials, to preserve digital data, to integrate databases, and to analyze data. Among these tools/systems, the Resource Sharing System is a unique information system developed at CSEAS that integrates more than 51 academic databases including those built by overseas' academic memory institutions. CSEAS is aiming to expand its information networks into ASEAN academic memory institutions.

### **AGENDA**

This workshop includes invited lectures, presentations by contributors, and interactive sessions based on the discussions at the previous workshops in Bangkok (2016 and 2017) and Kyoto (2017).

## Day 1

### 1. Lectures and Presentations:

Introductions of several important advanced technologies for curation and preservation of academic asset resources. This workshop will provide some invited lectures in the fields listed below. This workshop welcomes presentations about projects and research in Southeast and East Asia on these topics.

- Metadata/Application Profile
- IIF
- RDF/SPAQL or other frameworks
- OAIS or Archiving/Preservation Models
- etc.

## Day 2

### 2. Interactive Sessions and Discussions

#### 2.1 Interactive Session using Glocal Information Platform

To make our discussion more concrete, some tools developed by the collaborative projects of Kyoto University will be presented. CSEAS has been building the Glocal Information Platform (GIP), which is a cluster of information tools for area studies corresponding to the Linked Open Data environment. In this session, we will first explain and demonstrate some tools of GIP, and afterwards we will hold a training session with the use of some sample data. The discussed tools will be:

- MyDatabase (Database builder for humanities researchers): Lecture and Training.
- HuTime (Temporal information tool): Lecture and Training.

#### 2.2 Discussion for Collaboration to Share Digital Assets across Regions and over Time

Based on the ideas and thoughts about collaboration plans discussed in the previous workshops, in this session, we would like to discuss a collaboration plan which allows a loosely connected network of participating institutions. The figure shows an idea discussed at a workshop in Bangkok, November 2017, as a first step for data sharing. The figure illustrates the proposal for all member institutes to open their respective webpages which will include useful links to their academic digital resources such as photos, movies, sound and databases. In this workshop, we would like to:

- discuss its feasibility, schedule, minimum technical requirements, and problems (if exist) to achieve the goal of Phase 1,
- exchange information about tools and resources we can share, and
- prepare for the next workshop in 2019.

We welcome active and positive discussions by all participants
